Water

Q1. What are the two main natural sources of water?

Ans. _____

Q2. How rain water is important?

Ans. _____

Q3. Write two harmful effects of drought on plants?

Ans. _____

Q4. What do you understand by ground water?

Ans. _____

Q5. List some of the activities for which we use water in a day.

Ans. _____

Water

Q1. What are the two main natural sources of water?

Ans. The two main natural sources of water are:

1. Surface water – It includes rain water, river and lake water and sea water.
2. Underground water

Q2. How rain water is important?

Ans. The rainwater fills up the lakes and ponds. A part of the rainwater gets absorbed by the ground. Some of this water is brought back to the air by the process of evaporation and transpiration.

Q3. Write two harmful effects of drought on plants?

Ans. Without adequate water, photosynthesis in plants are greatly reduced which affects the plants growth adversely. After many weeks of such condition, plants die out.

Q4. What do you understand by ground water?

Ans. A part of the rainwater gets absorbed by the ground and seems to disappear in the soil. This water available beneath the surface of the earth is called ground water.

Q5. List some of the activities for which we use water in a day.

Ans. We need water for many activities such as for drinking, bathing, brushing teeth, washing utensils, washing clothes, for toilet purpose, for cleaning floor etc.
