## Garbage in, Garbage out

Q1. The use of plastics in itself might not create so much of a problem.  
Comment

Ans. The use of plastics in itself might not create so much of a problem. Problems arise when we use plastics excessively and are ignorant about ways of disposing their waste.

Q2. Suggest some handicrafts which can be prepared using waste material.

Ans. Files from old charts, greeting cards decorated with flowers made from pencil shavings, mats from old clothes, baskets from used old polythene bags and diary from invitation cards are some of the items which can be prepared using waste material.

Q3. Rag pickers always suffer from diseases. Give reason.

Ans. Garbage dumps have flies, cockroaches and mosquitoes, which later turn into breeding grounds for micro-organisms that may cause disease. While picking through waste, the rag pickers put themselves at a great risk and are always prone to disease as the waste that they searches through can be infected.

Q4. What are the effects of throwing garbage in open place?

Ans. Effects of throwing garbage in open place

- i. Garbage will start decaying and as a result of this, bad smell spread in the nearby areas.
- ii. It will become a breeding ground for mosquitoes and flies.
- iii. It cause air pollution and thus causes many health problems.
- iv. It destroys the aesthetic look of a place.
