Ans. _____

Q2. What is sewage treatment?

Ans. _____

Q3. Explain the function of bar screens in a wastewater treatment plant.

Ans. _____

Q4. Outline your role as an active citizen in relation to sanitation.

Ans. _____

Wastewater Story

Q1. How can we contribute in maintaining sanitation at public places?

Ans. All of us can contribute in maintaining sanitation at public places. We should not scatter litter anywhere. If there is no dustbin in sight, we should carry the litter home and throw it in the dustbin.

Q2. What is sewage treatment?

Ans. Cleaning of water is a process of removing pollutants before it enters a water body or is reused. This process of wastewater treatment is commonly known as "Sewage Treatment". It takes place in several stages.

Q3. Explain the function of bar screens in a wastewater treatment plant.

Ans. A bar screen is a mechanical filter used to remove large objects, such as rags and plastics, from wastewater. Wastewater is passed through bar screens. Large objects like rags, sticks, cans, plastic packets, napkins present in waste water are removed.

Q4. Outline your role as an active citizen in relation to sanitation.

Ans. As an enlightened citizen we should approach the municipality or the gram panchayat if we see open drains and insist that the open drains be covered. If the sewage of any particular house makes the neighbourhood dirty, we should request them to be more considerate about others' health.
