Q1. What are the climatic conditions required for growing tea?

Ans. _____

Q2. Mention the important inputs and outputs of agriculture along with the operations involved.

Ans. _____

Q3. Why different types of crops are grown in different regions?

Ans. _____

Q4. How can agricultural development be achieved?

Ans. _____

Agriculture

Q1. What are the climatic conditions required for growing tea?

Ans. Tea is a beverage crop grown on plantations. This requires cool climate and well distributed high rainfall throughout the year for the growth of its tender leaves. It needs well-drained loamy soils and gentle slopes. Labour in large number is required to pick the leaves.

Q2. Mention the important inputs and outputs of agriculture along with the operations involved.

Ans. The important inputs are seeds, fertilisers, machinery and labour. Some of the operations involved are ploughing, sowing, irrigation, weeding and harvesting. The outputs from the system include crops, wool, dairy and poultry products.

Q3. Why different types of crops are grown in different regions?

Ans. Different crops are grown in different regions because growing crops depends upon the geographical conditions, demand of produce, labour and level of technology. Favourable topography of soil and climate are vital for agricultural activity.

Q4. How can agricultural development be achieved?

Ans. Agricultural development can be achieved in many ways such as increasing the cropped area, the number of crops grown, improving irrigation facilities, use of fertilisers and high yielding variety of seeds. Mechanisation of agriculture is also another aspect of agricultural development.
