Agriculture

Q1. Distinguish between subsistence farming and intensive farming.

Ans. Difference between subsistence farming and intensive farming

Subsistence farming	Intensive farming
This type of farming is practised to meet the needs of the farmer's family. Traditionally, low levels of technology and household labour are used to produce on small output.	In intensive subsistence agriculture the farmer cultivates a small plot of land using simple tools and more labour.

Q2. What is plantation agriculture?

Ans. Plantations are a type of commercial farming where single crop of tea, coffee, sugarcane, cashew, rubber, banana or cotton are grown. Large amount of labour and capital are required. The produce may be processed on the farm itself or in nearby factories. The development of a transport network is thus essential for such farming.

Q3. By what names is shifting cultivation known in different regions of the world?

Ans. Shifting cultivation is known by different names in different parts of the world.

Jhumming - North-East India

Milpa -Mexico

Roca - Brazil.

Ladang - Malaysia
