Q1. How does climate affect the population distribution of an area?

Ans. _____

Q2. What does the shape of a population pyramid of Japan indicate?

Ans. _____

Q3. The world population has grown very rapidly. Why?

Ans. _____

Q4. Human resources are not equally distributed over the world. Why?

Ans. _____

Q5. What is the general trend of international migrations? Why?

Ans. _____

Human Resources

Q1. How does climate affect the population distribution of an area?

Ans. People usually avoid extreme climates that are very hot or very cold like Sahara desert, polar regions of Russia, Canada and Antarctica.

Q2. What does the shape of a population pyramid of Japan indicate?

Ans. In countries like Japan, low birth rates make the pyramid narrow at the base. Decreased death rates allow numbers of people to reach old age.

Q3. The world population has grown very rapidly. Why?

Ans. The main reason for this growth was that with better food supplies and medicine, deaths were reducing, while the number of births still remained fairly high.

Q4. Human resources are not equally distributed over the world. Why?

Ans. Human resources like other resources are not equally distributed over the world. They differ in their educational levels, age and sex. Their numbers and characteristics also keep changing.

Q5. What is the general trend of international migrations? Why?

Ans. The general trend of international migrations is from the less developed nations to the more developed nations in search of better employment opportunities.
