## Stars and Solar System

Q1. What are some unique characteristics of Saturn?

Ans. Saturn appears yellowish in colour. It has a well-developed system of rings around it. These rings are not visible with the naked eye. We can observe them with a small telescope. It also has a large number of satellites. One interesting thing about Saturn is that it is the least dense among all the planets. Its density is less than that of water.

Q2. Draw a diagram of Cassiopeia constellation to show the position of main stars in it.

Ans.
