

Name: _____ Date: _____

Pollution of Air and Water

Q1. Name some toxic metals whose compounds are present in industrial wastes.

Ans. _____

Q2. Name any two types of chemicals used in agriculture which cause water pollution.

Ans. _____

Q3. Name any three diseases caused by drinking polluted water containing sewage.

Ans. _____

Q4. Which gas is mainly responsible for greenhouse effect?

Ans. _____

Q5. What are the main gases that cause acid rain?

Ans. _____

Q6. Where are chlorofluorocarbons used?

Ans. _____

Q7. What are the major pollutants of air?

Ans. _____

Pollution of Air and Water

Q1. Name some toxic metals whose compounds are present in industrial wastes.

Ans. arsenic, lead and fluorides

Q2. Name any two types of chemicals used in agriculture which cause water pollution.

Ans. pesticides and weedicides

Q3. Name any three diseases caused by drinking polluted water containing sewage.

Ans. cholera, typhoid and jaundice

Q4. Which gas is mainly responsible for greenhouse effect?

Ans. Carbon dioxide is the gas which is mainly responsible for greenhouse effect.

Q5. What are the main gases that cause acid rain?

Ans. Sulphur dioxide and nitrogen dioxide are the main gases that cause acid rain.

Q6. Where are chlorofluorocarbons used?

Ans. Chlorofluorocarbons (CFCs) are used in refrigerators, air conditioners and aerosol sprays.

Q7. What are the major pollutants of air?

Ans. Carbon monoxide, nitrogen oxides, carbon dioxide, methane and sulphur dioxide are the major pollutants of air.
